PRELIMINARY AMENDMENT

Prior to examination, please amend the application as follows:

In the specification:

Replace the paragraph beginning at page 7, line 24 with the following rewritten paragraph:

A1
-- FIG. 6 shows a circuit 600 to extract the zero sequence (neutral) current 690 information in the case of a multi-phase power system network. This neutral current information is often necessary in a multi-phase power system network. The neutral current is extracted by summing together the three individual phase currents. The circuit also provides outputs for the individual phase voltages 636_A, 636_B, and 636_C, and outputs for the individual phase currents 666_A, 666_B, and 666_C.--
